

## Embedding YouTube Content in Blackboard

1. Locate your video on YouTube. Look below the video player for the → Share button.

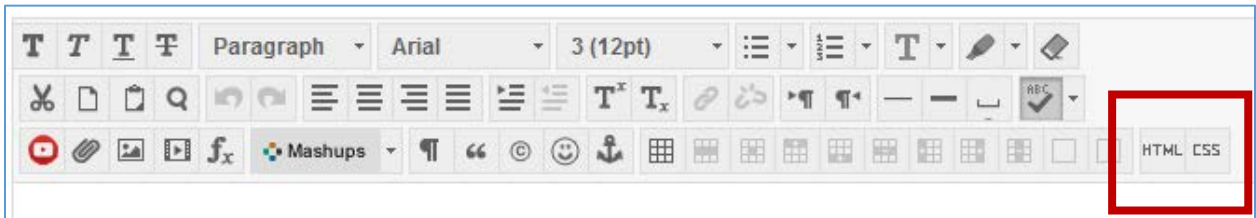

2. Click 'Share'. In the popup that appears, you will see several share options. The first is simply a link to the video – you can add this link to your Blackboard class, email, wherever – and it will take students to the video.
3. If you want your video to play within your Blackboard class without students being redirected to YouTube, click the <EMBED> button. You will see this:

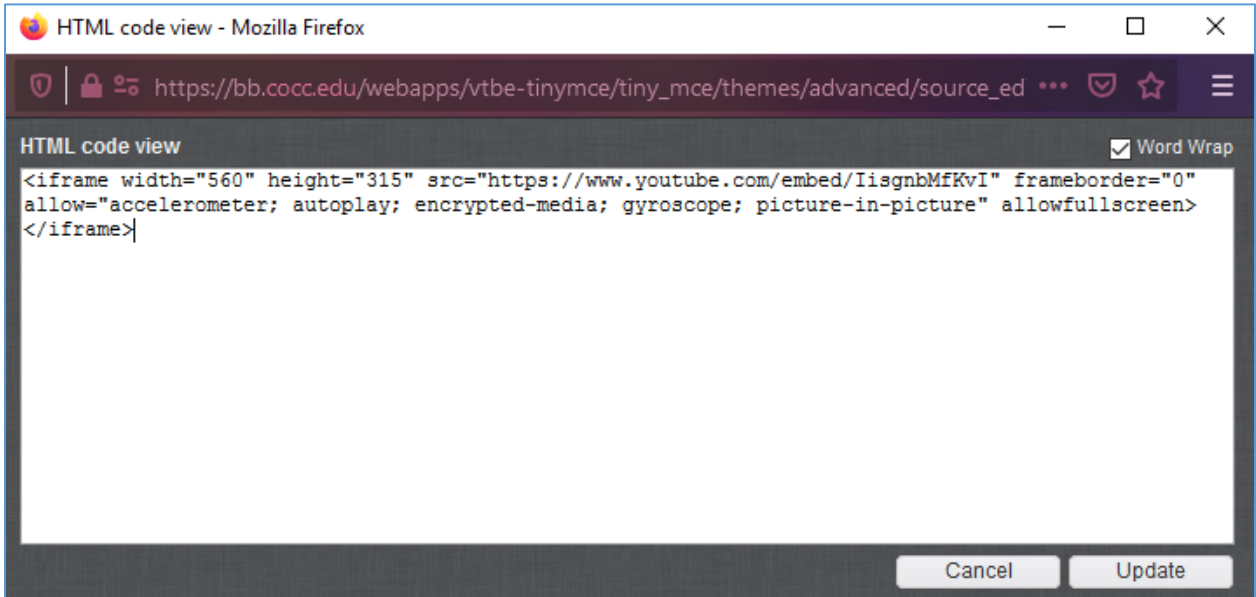

Click the **'COPY'** button, or click and drag to highlight the text starting with `<iframe.... </iframe>`

4. Open Blackboard and navigate to where you want video to appear.
5. In the Build Content menu, select **'Item'**

6. Expand the Text Editor and click the button that says 'HTML'

7. In the popup, paste the text you copied from YouTube. Click 'Update'. You should see a yellow placeholder in your Bb Item.

8. Click **Submit** to Save. The video will now appear in-line with your Blackboard content.
