

	Title: Rodent Euthanasia	SOP #	AV 40-102	
		Version #	1	
Page #	1 of 4	Implementation Date	10/21/16	
Department	Attending Veterinarian		Next Review Date	10/21/19

Standard Operating Procedure

1. Purpose

To establish minimum standards for euthanasia of rodent species.

2. Scope

All units providing animal care for rodent species must meet or exceed these minimum requirements for euthanasia based on the *Guide for the Care and Use of Laboratory Animals* and the *AVMA Guidelines for the Euthanasia of Animals*.

Exemptions to these policies must be approved by the Institutional Animal Care and Use Committee (IACUC) and/or the Attending Veterinarian.

3. Responsibilities

The Attending Veterinarian (AV) is responsible for the health and well-being of all laboratory animals used at an institution. The AV must assure that euthanasia is carried out by trained personnel using acceptable techniques in accordance with applicable regulations and policies.

Personnel who perform euthanasia must have documented training, experience and competency with the techniques to be used.

4. Procedure

The agents and methods of euthanasia appropriate for rodent species are available in the *AVMA Guidelines for the Euthanasia of Animals: 2013 Edition* (<https://www.avma.org/KB/Policies/Documents/euthanasia.pdf>) or subsequent revisions of that document. Euthanasia is the procedure of killing an animal rapidly, painlessly, and without distress.

Euthanasia must be carried out by trained personnel using acceptable techniques in accordance with applicable regulations, protocols, and policies. The method used should not interfere with postmortem evaluations. Proper euthanasia involves skilled personnel to help ensure that the technique is performed humanely and effectively and to minimize risk of injury to people. Personnel who perform euthanasia must have training and experience with the techniques to

be used. The equipment and materials required to perform euthanasia should be readily available, and the Attending Veterinarian or a qualified animal scientist should ensure that all personnel performing euthanasia have demonstrated proficiency in the use of the techniques selected.

Euthanasia techniques should result in rapid unconsciousness followed by cardiac or respiratory arrest and the ultimate loss of brain function. In addition, the technique used should minimize any stress and anxiety experienced by the animal before unconsciousness. For this reason, anesthetic agents are generally acceptable, and animals of most species can be quickly and humanely euthanized with the appropriate injection of an overdose of a barbiturate. Certain other methods may be used for euthanasia of anesthetized animals because the major criterion (insensibility) has been fulfilled.

Physical methods of euthanasia may be used if persons performing the procedure are properly trained. If physical methods such as cervical dislocation are used, anesthetizing the rodent prior to this procedure is recommended. Every attempt should be made to minimize stress to the animal before euthanasia.

If euthanizing more than one animal at a time in the same chamber, the chamber must not be overcrowded. Animals must be able to move freely and make normal postural adjustments. Only animals of the same species may be euthanized in the same chamber at the same time.

2013 AVMA Guidelines for the Euthanasia of Animals: Rodent Species

Acceptable Methods	Acceptable with Conditions
Injected barbiturates and barbiturate combinations, dissociative agent combinations	Inhaled anesthetics, CO2**, CO, tribromoethanol, cervical dislocation, decapitation, focused beam microwave irradiation

Verification of Death:

No matter what method of euthanasia is performed, personnel must ensure that death has occurred. Assurance of death may include ascertaining the absence of heartbeat and respiration, lack of corneal or other reflexes, and lack of physical movement. Personnel must be trained on how to assure death in animals.

6. Definitions

1. AV – Attending Veterinarian – responsible for the health and well-being of all laboratory animals used at the institution
2. AVMA – American Veterinary Medical Association – a not-for-profit organization for advancing the science and practice of veterinary medicine to improve animal and human health
3. SOP – Standard Operating Procedure – established or prescribed methods to be followed routinely for the performance of designated operations or in designated situations
4. IACUC – Institutional Animal Care and Use Committee – responsible for assessment and oversight of the institution’s animal care program components and facilities
5. Chair – Chairperson of the IACUC
6. PI – Principal Investigator – a Central Oregon Community College employee having the background and training in scientific and administrative oversight necessary to conduct and manage the proposed study
7. AUP – Animal Care and Use Protocol – protocol created by the principal investigator of the proposed research, testing, or educational study
8. Protocol – Animal Care and Use Protocol – protocol created by the principal investigator of the proposed research, testing, or educational study
9. COCC – Central Oregon Community College
10. Guide – the *Guide for the Care and use of Laboratory Animals*
