

Math Level 24 Placement

There are three different pathways to the math course required for your academic goal. Two of these pathways, Quantitative Reasoning and STEM, are intended for students planning to transfer to a four-year institution and the third is for those in Career and Technical Education (CTE) programs.

The STEM path is for students whose academic goal is a Bachelor's degree in fields such as Engineering, Computer Science, Biology, and others. If you are on this path, Math Level 24 placement means you are eligible to take a calculus class beyond MTH 251 which is the first course in the calculus sequence.

If placed at this level and you plan to take more calculus courses, please consult with a faculty member in the math department to determine the proper course placement for you.

Your advisor will help you determine the correct path and course for your academic goal. More information on the complete paths is available here: [Math Course Flow 2020-21](#)

Math Course Pathways

Below are some questions to consider before you meet with a COCC advisor. Remember, you do not need to make the decision about which pathway you are on by yourself – you will have advising help in the future to guide your choice.

Are you considering a field such as Music, Psychology, Art or History?

Quantitative Reasoning Pathway (path to Statistics)

Are you considering a science field such as Engineering, Computer Science or Biology?

STEM Pathway (path to Calculus)

Are you considering a Career-Technical field such as Automotive, GIS, or Welding?

Career-Technical Education (CTE) Pathway
